

A bar chart showing the FWHM ENC [keV] on the y-axis (ranging from 0 to 4.5) versus Peaking times on the x-axis (ranging from 0 to 7). The chart displays multiple data series for each peaking time, represented by thin vertical bars in various colors (blue, orange, green, purple, red, etc.). The FWHM ENC values generally fluctuate between 2.0 and 4.0 keV across the different peaking times.
